

Expert in **Ventilation** in harmful, corrosive & odorous environments

John Cockerill Europe Environnement makes available to you the highest performing equipment **for collecting and ducting polluted air** from your processes to the treatment system, and **for ventilating the work stations in numerous applications**, such as:

Water treatment

Surface treatment

Light & heavy chemistry

Treatment of waste & composting

Various industries: tanneries, etc.

In both heavy and light chemicals, the production and transformation processes call on extensive wide range of chemical elements; resulting in a wide variety of polluting gaseous emissions: our job is to define and set up the optimal treatment solution in line with your requirements and those of the regulations in force.

Thanks to its know-how and technological skills John Cockerill Europe Environnement helps to:

- Protect on site operators
- Control your gaseous releases
- Preserve your working environment: buildings and equipment
- Enhance your image among local residents and clients

Sizing

Optimizing

Manufacture

Assembling

Commissioning

Maintenance & After-sales servicing

A complete range of **corrosion-resistant plastic Fans**

Medium / High pressure centrifugal fan

Laboratory centrifugal fan

Helicoid fan

Axial fan

A complete range of **corrosion-resistant ventilation accessories**

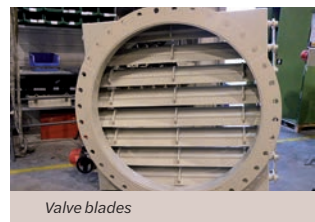

Pipes & Elbows

Vents

Flanges & Fittings

Valve blades

Dampers

Fume hoods

Mufflers

Chimney

A complete range of **physical treatment**

Droplet separators

Radial demister

Activated carbon case

Tailor-made technical devices
